# Merged Phase 2 + 3 — UI/UX & Implementation

3 - 8 November 2026 (6 days) · Submission Deadline: Sunday 8 November - 9:00 AM

Phase 2 (UI/UX) and Phase 3 (implementation) are **now one Merged phase**. **Every team designs and implements its own version of the Rating System With respect to the requirements agreed below.** The product is intentionally small: depth, clarity and polish matter more than feature count.

## WHAT EVERY TEAM DOES

- Designs and builds its own UI/UX and implementation — there **is no shared UI/UX design to adopt.**
- Builds its **own anti-abuse approach.**
- Creates a niche, intentional UI/UX. No generic AI-generated interfaces.
- **Asks staff** for feedback early and often. This is a learning hackathon.

## SYSTEM REQUIREMENTS

### Rating & labels

Students rate each other from **1 to 3 stars**. The star level controls which labels are available.

| Stars | Meaning | Example Labels available |
|---|---|---|
| **3 stars** | Positive impact | Helpful · Good teammate · Community contributor · Respectful · Fair · Thorough · Clear explainer · Helpful feedback · Well prepared · Knows their code · Open to feedback |
| **2 stars** | Neutral or a small issue | Some of 3-star labels + Unreliable teammate · Disruptive · Rushed · Late · Defensive |
| **1 star** | Serious issue | serious flags like : Aggressive behavior · Disrespectful · Bad Evaluator · Unprepared. Small-issue labels are also available. |

### Learner experience

- Rate other students with 1 – 3 stars and labels.
- See only their own rating as a star average. No labels are shown to them.
- Cannot see other students' ratings or labels.
- See how many votes they have left.
- See a timer for the voting deadline.

### Staff Experience

- **Staff can see:**

- The number of ratings, how many students rated and how many did not.
- Which students rated and how many votes each gave.
- For each student: who they rated, who rated them, the labels they received, and their rating.
- Ratings grouped by label, by stars, or by one student.
- Who voted and who did not in a specific voting window.

- **Staff can:**

- Add, remove or control labels.
- Set the minimum and maximum votes per student in a voting window.
- Set and change the voting window at any time.
- Export the ratings as a CSV file.

- **Abuse detection & review**

The system must identify abuse and unusual voting, then show it to staff in **one readable place (window, page, etc…)** . For every case, show **what the abuse is** and **which students are involved**. Use plain language, not the algorithm.

| Example Cases | What it looks like |
|---|---|
| **Bulk votes** | Many votes on one student in a short time. |
| **Repeated votes** | The same student voting on the same student again and again. |
| **Group voting** | A group of students voting the same way on one student. |
| **Pair voting / revenge** | Two students rating each other, including retaliation. |
| **Friends boosting** | A group giving each other high votes. |
| **Too fast or too often** | Many votes in a very short time, or an unusual volume. |
| **Extreme voter** | Someone who only gives 1 star or only 3 stars. |
| **Malicious serious vote** | A 1-star vote with an invented flag or explanation. |

- **Staff can invalidate (negate) a vote once it is confirmed as abuse.**
- All unusual cases appear in one window, with every mechanism and the students involved.
- The output must be readable for staff: no raw algorithm dump.

**Privacy & access**

- Students see only their own rating (star average), never labels or other students' data.
- Staff see full analytics; access is role-based and staff-only.
- CSV export is staff-only.
- No student can query another student's rating through the UI or API.
- Store student data securely and do not expose identifiers publicly.

## HOW YOU WILL BE EVALUATED

No community vote in this phase. Staff evaluate the merged UI/UX + implementation against this rubric.

| Criterion | Weight | What we look for |
|---|---|---|
| **Coverage of requirements** | 30% | All required flows work end-to-end. |
| **UI/UX nicheness** | 30% | A distinct direction; not generic AI slop. |
| **Technical excellence** | 20% | Clean architecture, secure roles, your own anti-abuse approach. |
| **Maturity & stability** | 20% | Bug-free core flows and a reliable live demo. |

## DELIVERABLES & DEADLINE

- repository, and live demo.
- 5 – 8 minute live demo plus Q&A.
- **Final demos: Sunday 8 November, 3:00 PM.**
- **Submit all links by Sunday 8 November – 9:00 AM**
  - Any GitHub Commits reported after the deadline you will be **DISQUALIFED.**
  - Any Work/Commits Different Than Committed on GitHub Repo Will not be **Counted / Disqualified**.
- The final winner is announced at the demo.

**Build something specific, thoughtful and yours.**
