2. Staff Experience (PC)

Assigned workstream | UI/UX and frontend delivery | 3 to 8 November 2026

Workstream definition

Devices: PC browsers. **Product:** Staff-only administration and rating review interface.

Required screens and features

- **Overview dashboard:** Show the number of ratings, how many students rated and how many did not.
- **Participation:** Show which students rated and how many votes each gave. Show who voted and who did not in a specific voting window.
- **Student details:** For each student, show whom they rated, who rated them, the labels they received and their rating.
- **Rating explorer:** Show ratings grouped by label, by stars or by one student.
- **Label management:** Add, remove or control labels.
- **Voting configuration:** Set minimum and maximum votes per student in a voting window. Set and change the voting window at any time.
- **CSV export:** Export ratings as a CSV file. Export must be staff-only.
- **Abuse review:** Identify abuse and unusual voting. Show all unusual cases in one readable place, describing what the abuse is and which students are involved in plain language, without raw algorithm output.
- **Vote invalidation:** Staff can invalidate (negate) a vote once it has been confirmed as abuse.

Abuse cases the interface must accommodate

- **Bulk votes:** Many votes on one student in a short time.
- **Repeated votes:** The same student votes on the same student again and again.
- **Group voting:** A group of students votes the same way on one student.
- **Pair voting / revenge:** Two students rate each other, including retaliation.
- **Friends boosting:** A group gives each other high votes.
- **Too fast or too often:** Many votes in a very short time or an unusual voting volume.
- **Extreme voter:** Someone gives only 1-star or only 3-star ratings.
- **Malicious serious vote:** A 1-star vote with an invented flag or explanation.

Desktop UX and safety requirements

- **PC:** Design and implement the staff experience for PC browsers.
- **UI/UX direction:** Create a niche, intentional UI/UX, not a generic AI-generated interface.
- **Staff-only access:** Full analytics and staff controls require staff role-based access.

- **Data privacy:** Students cannot access these staff-only records through the UI or API. Student data must be stored securely and identifiers must not be exposed publicly.

Deliverables and acceptance criteria

- Staff Experience is included in the team repository and live demo.
- Staff can review rating activity, participation, individual student records and ratings grouped by star, label or student.
- Staff can manage labels, configure vote limits and voting windows and export CSV.
- Staff can inspect every unusual voting case in one readable place and invalidate confirmed abusive votes.

Dependencies and boundaries

- The system must detect the unusual voting cases listed above and present them to staff.
- Role-based access must enforce staff-only analytics, controls and CSV export.
