1. Student Experience (PC and Mobile)

Assigned workstream | UI/UX and frontend delivery | 3 to 8 November 2026

Workstream definition

Devices: PC and mobile browsers. **Product:** Student website for PC and mobile.

Required screens and features

- **Student dashboard:** Display only the signed-in student's own rating as a star average, the number of votes left and a timer for the voting deadline.
- **Submit rating:** Allow a student to rate another student from 1 to 3 stars and select labels allowed for that star level.
- **3-star rating (positive impact):** Helpful; Good teammate; Community contributor; Respectful; Fair; Thorough; Clear explainer; Helpful feedback; Well prepared; Knows their code; Open to feedback.
- **2-star rating (neutral or a small issue):** Some of the 3-star labels plus Unreliable teammate; Disruptive; Rushed; Late; Defensive.
- **1-star rating (serious issue):** Serious flags such as Aggressive behavior; Disrespectful; Bad Evaluator; Unprepared. Small-issue labels are also available.
- **Voting limits and window:** The number of votes left and the deadline timer must reflect the voting window and the minimum and maximum votes set by staff.
- **Privacy:** Students see only their own star average. They cannot see their own received labels or other students' ratings or labels.

Desktop and mobile design requirements

- **PC and mobile:** Design and implement the Student Experience for both PC and mobile.
- **UI/UX direction:** Create a niche, intentional UI/UX. Do not use a generic AI-generated interface.

Deliverables and acceptance criteria

- Student Experience is included in the team repository and live demo.
- Students can rate another student from 1 to 3 stars using the labels permitted for the selected star level.
- Students can see only their own star average, votes left and voting deadline timer.
- Students cannot obtain another student's ratings through the UI or API.

Dependencies and boundaries

- Staff configure the available labels, minimum and maximum votes and the voting window.
- Role-based access and secure storage must prevent student access to other students' rating information.
