42 Amman Community Hackathon: The Rating System

Building together, learning together, and shaping our campus tools!

Hey everyone! Following up on our recent onboarding session, we're super excited to officially kick off our upcoming **community hackathon**. This isn't just another coding project , it's a chance for the entire campus to come together, collaborate across experience levels, pitch real ideas, and build 42 Amman's official Rating System from scratch.

The goal here is simple: form new connections, learn how to work under continuous feedback, and solve a real problem for our community. Plus, the winning team's design and code will actually be implemented right here at 42 Amman, **with plenty of Intra Shop rewards to celebrate your hard work**!

1. Team Formation Guidelines

To make sure we're building a real community spirit, we have a few friendly rules for forming your teams:

- **Team Size:** 3 to 4 members per team.
- **Mixed Composition:** Teams **MUST be a mix of Core Old + Core New learners**. We want to break out **of routine cliques, pass down knowledge, and make sure everyone feels included**. Fixed, pre-existing teams **won't be approved!**
- **Registration Deadline:** Before the end of the working day on Wednesday, October 28, 2026.
- **How to Register:** Once your team is ready, **ONE representative needs** to send a quick DM on Slack to **Mohammad Salim (mosalim)** with your complete team list.

2. How the Hackathon Works (Phases)

We're breaking this process down into clear, structured phases so everyone stays aligned:

- **Phase 1 — Idea Generation & Convergence:** Each team (plus staff!) will brainstorm and pitch an idea for how the Rating System should work. During our group session on **next Sunday, 1/Nov**, 2026, we'll present, discuss, and vote on the best concepts. Ultimately, we'll merge the strongest features into ONE unified community specification that everyone agrees on.
- **Phase 2 — UI/UX Design (No Code!):** Once the idea is locked in, each team will design the user interface and experience (using Figma or any design tool you like). No code yet! You'll present your design, get feedback, refine it, and then we'll choose the best UI/UX direction for all teams to adopt.
- **Phase 3 — Implementation & Coding:** With agreed designs and features in hand, teams will dive into coding! You're free to use any tech stack your team prefers, with light guidance from staff on the core requirements.

3. Core Requirements & Challenges to Solve

Whatever tech stack or architecture you choose, your team's concept must solve these three core problems:

- **1. Fair 3-Star Rating & Flagging:** The system must use a clear 1 to 3 Star rating scale, along with predefined flag reasons (e.g., 'Bad Evaluator', 'Aggressive Behavior', etc.) for raters to choose from.
- **2. Anti-Abuse & Spam Protection:** We need smart checks or algorithms to prevent malicious or targeted down-voting (e.g., groups of students giving someone low rates out of nowhere with no evidence).
- **3. Privacy & Visibility Controls:** Learners can only see their own aggregate 3-star rating. Only staff members have full administrative visibility into all detailed metrics, individual flags, and analytics.

> 📌 **IMMEDIATE NEXT STEPS**
>
> 1. Form your mixed team with both new and old core learners today.
> 2. Have ONE member DM your full team list to Mohammad Salim (mosalim) by Wednesday, Oct 28 (End of Day).
> 3. Start brainstorming your idea so you're ready to pitch at the Idea Discussion **Session on Sunday 1/Nov/2026**

Let's bring our best ideas forward and build something awesome for 42 Amman. If you have any questions, feel free to reach out to Mohammad Salim on Slack!
